C/O: Mr Bill Nicoll, cmi  
Re: 1212 Drive; Pre TestDate of Sampling: 10-14-2019  
Date of Receipt: 10-17-2019  
Date of Report: 10-17-2019**DIRECT MICROSCOPIC EXAMINATION REPORT**

Background Debris and/or Description	Miscellaneous Spores Present*	MOLD GROWTH: Molds seen with underlying mycelial and/or sporulating structures†	Other Comments††	General Impression
Lab ID-Version‡: 10828827-1, Analysis Date: 10/17/2019: Swab sample S1: Trim				
Light	Few	2+ <i>Stachybotrys</i> species (spores, hyphal fragments) 1+ <i>Penicillium</i> species (spores, hyphae, conidiophores)	None	Mold growth
Lab ID-Version: 10828828-1, Analysis Date: 10/17/2019: Tape sample T1: Drywall Foyer				
Light	Very few	4+ <i>Stachybotrys</i> species (spores, hyphae, conidiophores) 3+ <i>Penicillium</i> species (spores, hyphae, conidiophores) 1+ <i>Aspergillus</i> species (spores, hyphae, conidiophores)	None	Mold growth

\* Indicative of normal conditions, i.e. seen on surfaces everywhere. Includes basidiospores (mushroom spores), myxomycetes, plant pathogens such as ascospores, rusts and smuts, and a mix of saprophytic genera with no particular spore type predominating. Distribution of spore types seen mirrors that usually seen outdoors.

† Quantities of molds seen growing are listed in the MOLD GROWTH column and are graded <1+ to 4+, with 4+ denoting the highest numbers.

†† Some comments may refer to the following: Most surfaces collect a mix of spores which are normally present in the outdoor environment. At times it is possible to note a skewing of the distribution of spore types, and also to note "marker" genera which may indicate indoor mold growth. Marker genera are those spore types which are present normally in very small numbers, but which multiply indoors when conditions are favorable for growth.

‡ A "Version" indicated by "-x" after the Lab ID# with a value greater than 1 indicates a sample with amended data. The revision number is reflected by the value of "x".  
The limit of detection is < 1+ when mold growth is detected.
